

SDSS(SHARP Digital Signage Software) V3.0

Conditional Media Contents

Conditional Content consists of multiple pairs of a condition and media files. Viewer PC check the condition of conditional content and then play the content whose condition is true. Condition is a combination of Time, Day and Viewer PC's attributes(comments) etc..

【Playing order】

8:00AM-6:00PM

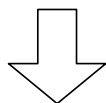

6:00PM-0:00AM
0:00AM-8:00AM

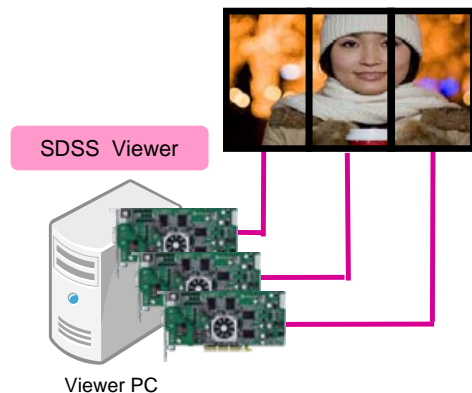

Skip conditional content if there is no content whose condition is true.

Multiple Displays Management

SDSS currently can check the status of only one display and cannot check the status of each display.

SDSS Ver.3.0 can get the status of each display connected to Viewer PC and show all displays status.

Option Settings for Program Preview

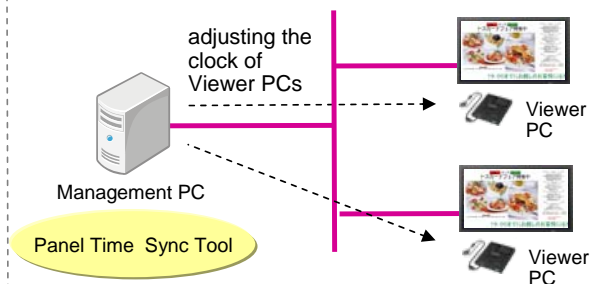

- Start previewing program in consideration of the length of time you specified.
If you use this feature, you can skip media content files you don't want to check.
- Preview Conditional contents with the conditions you specify
- Preview program with display bezels

For example, an image will be divided into some images. You can check whether each divided images is good or not.

Changing Programs Synchronously among Viewer PCs

Changing media contents shown on all displays at the same time (synchronously).

(ex.) JR station yard
